² Department of Computer Science, Other University, City, Country
`second.author@example.com`

Abstract. This document is a starting point for a Springer LNCS conference submission. Replace this abstract with a concise summary (150–250 words) of the problem, approach, and key results of the work.

Keywords: keyword one · keyword two · keyword three

1 Introduction

Introduce the problem, motivate why it matters, summarize prior approaches and their limitations, and state the paper’s contributions as a short itemized list.

2 Related Work

Summarize and position the work relative to the most relevant prior literature, organized by theme rather than chronologically.

3 Proposed Method

Describe the proposed method, model, or system.

3.1 Problem Formulation

State assumptions and formal notation here.

3.2 Approach

Describe the core technical contribution here.

4 Experiments

Describe the experimental setup: datasets, baselines, evaluation metrics, and implementation details needed for reproducibility.

5 Conclusion

Summarize findings, discuss limitations, and outline directions for future work.
